the American Medical Association's Center for ealth Services Research and Development (AMA-HSRD) to provide comprehensive, detailed and acrate data on the entire physician population in the nited States. Characteristics of Physicians is related to o other AMA-CHSRD publications: Physician stribution and Medical Licensure in the United ates, and Medical School Alumni. This publication

Characteristics of Physicians represents an initiative

fers from these in that more characteristics are de-

led for smaller geopolitical units of analysis. Comehensiveness and detail do, however, have their cost. total of fifty-one volumes, one for each of the States d the District of Columbia, are required in order to esent these data. uccessful completion of this project has required peration between the AMA and the Bureau of ealth Manpower of the Department of Health, Educaon, and Welfare (DHEW). The AMA Physician asterfile is the data source and considerable resources ve been utilized by the AMA in developing the comter programs and designing the volumes. Contract

dition to the bound volumes, print tapes of the inforation contained in this report are available from the ireau of Health Manpower. Howard V. Stambler, rector of the Division of Manpower Analysis of the reau of Health Manpower is the Contract Project Ofer. Views or conclusions contained in this study ould not be interpreted as representing the official inion or policy of the Department of Health, Educan, and Welfare. Characteristics of Physicians was conceived by AMA-HSRD partially in response to passage of the National ealth Planning and Resources Development Act of 74 (PL #93-641). With passage of this legislation it came apparent that planning and regulation were to come integral components of the health care system in e United States. The distribution of physicians also has been the ob-

IRA-232-78-0163 with the Health Resources Adnistration of DHEW has provided the financial sup-

rt needed to print and disseminate these volumes. In

at of Federal legislative action for several decades. ace 1965, four separate pieces of legislation each atnpting to effect a different distribution of health anpower resources have been enacted by the federal vernment. The most recent of these is the Health Pro-

possible.

484). Specifically, this Act ties Federal capitation gra to the specialty distribution of first-year residence Further, the loan forgiveness program for physici locating in designated shortage areas has b strengthened. Directly related to health manpo legislation is the designation of shortage areas. Are criteria for designating shortage areas appropriate? those areas designated as such really experiencing sh tages? These issues and related ones have not b resolved. The Characteristics of Physicians series is an effort

meet some of the data requirements inherent in no market approaches to resource distribution and allo tion. Assessment of specialty and location m distributions, determination of physician shortage are and planning to ensure that health care needs are met quire detailed data on relevant characteristics of physician population. Data in the COP Series are ma available with the expressed hope that they will coupled with intelligent analysis and careful policy f mulation.

Use of these data, however, will not be restricted

policy makers. In addition, individual physicians m utilize Characteristics of Physicians for making locati

and migration decisions, and medical societies ma

consult Characteristics of Physicians to ascertain

types of continuing medical education programs lik

to be of interest to a large proportion of physicians the region. Researchers in health care and in the soci sciences have also repeatedly expressed a need for type of data provided. Therefore, Characteristics Physicians is being widely distributed in an attempt meet the repeatedly expressed needs of numero groups. The efficacy of the market as an allocative a distributive mechanism for health care resources ag is gaining supporters. It will be some time, however before the desired incentives can be reintroduced in the health care market. Until that time, the AM CHSRD is attempting to ensure that all decision

relating to health personnel are based on the best d

available and, thus, introduce as few distortions Lynn E. Jensen Project Director and Director, Center for Health Services Research and Developme

tion have contributed to the success of this endeavor over its several years. The authors wish to thank Chris N. Theodore, Group Vice-President, Operations and Development Group, for his overall support of this project's goal from its conceptualization in 1976 to its completion. Special appreciation goes to Lynn E. Jensen, Director of the Center for Health Services Research and Development, and Project Director, for his efforts in making the project possible and in assuring the availablity of resources necessary to its successful completion. Gene Roback of the AMA Survey Data Center gave helpful advice and comments during conceptualization and throughout the term of this project. Gary Schneier and Raymond Healy, from the AMA

Division of Computer and Information Services, pro-

vided the programming expertise needed to complete

Arsenio Oloroso provided editorial advice through innumerable phases of publishing 50 seemingly indistinguishable state editions; Dorothy Pazur and Barnette Collins assumed day-to-day administrative Finally, the authors also wish to thank Howard V. Stambler, Director, Division of Manpower Analysis, Bureau of Health Manpower, Department of Health. Education, and Welfare, and Project Officer, for his efforts to make publication and distribution of the volumes possible. Special appreciation goes to Lucy Kramer, Contract Liaison, for her work in coordinating publication and dissemination activities for the Bureau.

Within the Center, numerous individuals played significant roles during the course of the project: Wayne

Wendling and Glen Misek handled a number of tasks

relating to verification, progress reports, and coor-

dinating later phases of the preparation for publication

WOLK TOL THE ACTUMES.

INTRODUCTION

aracteristics of Physicians (COP) provides detailed ormation on several key characteristics of physicians their geographic distribution in the United States as December 31, 1975. This is the first American edical Association publication to present data for the 5 health service areas (HSA's) designated under the tional Health Planning and Resources Development t of 1974 (PL #93-641). There is a separate volume of OP for each of the fifty states and the District of Colibia. Each presents state-specific detailed data for alth service areas, demographic county groups, and unties, as well as summary national data for comrative purposes. Thus, the series provides the only mpatible data base on physicians across all areas and ould be of significant use to practitioners and rerchers in the health care industry.

The data presented here are for the physician populan practicing in the United States. Detailed characterics are presented for all physicians with known adesses in a geographic region who are professionallysive. In addition, counts of physicians who are inacor are not classified are provided on each table.

December 31, 1975 was selected as the point in time of s report for the following reasons;

- PL #93-641 was signed in January, 1975, and it
 was only during 1976 that significant activity was
 undertaken in response to this legislation. Thus,
 1975 represents the last year in which the health
 care system was not affected by this major piece
 of legislation and, therefore, is the most appropriate base year for future analyses of the impact of this legislation.
- Because this represents the first statistical series
 of its scope, an exceptional amount of time had
 to be expended in the conceptualization of the
 project, preparation of data set, and writing of
 the necessary computer programs. However,
 plans are being developed for publication of
 these volumes on a more regular and current
 basis in the future.

The introductory material which follows provides finitions and discussions of the geographic aggregans and the specific physician characteristics tabulated. is publication's relationship to other AMA publicans and to other data sources is detailed. In addition, American Medical Association Physician Masterfile described; a list of the health service areas covered in s volume is given; and a sample of the questionnaire nich is sent to physicians for the purpose of updating e AMA Physician Masterfile is included. Twenty-one oles listed in the Table of Contents—six national ples, which are repeated in all 51 volumes, and 15 te-specific tables providing: state, HSA, county oups and county data—follow immediately. An addinal table which provides medical school data is inided for states having medical schools.

REFERENCE MATERIAL ON TABULATIONS

The Characteristics of Physicians series provides tabultions on the geographic distribution of all physicians the United States as of December 31, 1975. Physicia who were temporarily in foreign locations are exclud from all tabulations. All data presented in this public tion were developed from the American Medic Association Physician Masterfile.

Because the primary concern of policy makers a planners, in most instances, is the adequacy of hea care services to meet the needs of the civilian popution, many tables report Federal and Non-Fede physicians separately. In some geographic regions, clusion of Federal physicians in the tables would privide an upward bias to the real supply of physician s vices available to the general population.

Geographical Units of Aggregation

Each volume of COP represents data for the Unit States as a whole; for the particular state; and the cotty groups, health service areas, and counties within the state. Each physician is allocated to a particular geographic location on the basis of his/her profession mailing address as recorded in the AMA Physicial Masterfile.

The geographical subdivisions within the state requadditional explanations. These follow immediat below.

County Group

classifications.

The county group tables (Tables 13-15) use Demographic County Classification based on Sales Marketing Management, Inc.'s population estima and Standard Metropolitan Statistical Areas (SMSA definitions. The SMSA's serving as the basis for cour size groups 6 through 9 are based on the metropolis area concept established by the United States Bureau the Budget.1 An SMSA consists of the following: 1 central city of 50,000 or more inhabitants; 2) the mainder of the county in which the central city located; and 3) contiguous counties that are integra economically and socially with the county contain the central city. The group 5 county classification cludes "Potential SMSA's" as defined by Sales Marketing Management, Inc. and are considered fut candidates for SMSA status. The county classification 1 through 4 include counties in nonmetropolitan are Table A below summarizes the 9 demographic cou

The distributions of physicians are described in this

lume in terms of a number of professional character-

ics, with some individual characteristics cross-

oulated with others. Key characteristics include

ecialty, major professional activity, age, sex, board

tification, Federal or Non-Federal employment, and

te and county of graduation. The thirty-six specialty

ssifications used in this publication are the same as

ose used in other AMA publications such as the Physi-

in Distribution and Medical Licensure in the U.S.,

76 and are presented in Table B. A physician's

number of county tables utilize the classification

stem of primary care/non-primary care specialists.

imary care physicians, for the purposes of these

oles, are physicians whose specialty is general prac-

e, family practice, internal medicine, pediatrics, and

practice" and "hospital based practice," either as a resident or full-time hospital staff. Non-patient care activities, such as administration, medical teaching, and medical research are also reported separately. Two of

the activity categories—inactive and not classified may need further clarification. Inactive physicians are those who have reported to the AMA via the Physician's

Professional Activity questionnaire that they are either retired, semi-retired, permanently disabled, temporarily not in practice, or not active for other reasons. Physicians who are categorized as not classified are those for

whom the AMA has not received any information as to their type of practice and present employment. Definitions of the two other classifications used in describing physician characteristics are: Age as defined in terms of intervals of under 35, 35 to 44, 45 to 54, 55 to 64, 65 to 75, and 75 and over; Federal employment as

defined as employment by the Veterans Administration, Military Services, the U.S. Public Health Service, and other Federal Service. The medical education background of physicians is presented in several forms. Physicians who graduated

from United States medical schools are categorized by the school of graduation and the state in which they currently are practicing medicine. In addition, physicians located in a particular county group or county within a state are cross-categorized either as having graduated from a medical school in the state, in a contiguous state, in some other state, in Canada, or outside the United States and Canada.

RELATIONSHIP TO OTHER AMERICAN MEDICAL ASSOCIATION **PUBLICATIONS** AND TO THE COOPERATIVE HEALTH STATISTICS SYSTEM (CHSS)

Although previous AMA publications, Physician

Distribution and Medical Licensure in the U.S., and Medical School Alumni, have reported similar information, Characteristics of Physicians provides more detailed information than previously available in published forma.

The publication has two key features: greater detail of physicians' characteristics and greater detail with respect to geographic units. More detail is provided for age distributions, sex, and specialty board certification-for states, county groups, individual counties, and for the health service areas. Thus, this publication attempts to meet a more extensive set of data needs not met by other AMA publication series.

A data collection effort to provide information similar to the days published in Characteristics of Physiclass is being undertaken by the Cooperative Health Statistica System (CHSS). Although this system eventundly is to collect dute on a state-by-state basis for thirteem health related occupations, reports published as a remain of CHSS have not contained the level of detail available in the Characteristics of Physicians.4 For instance, Characteristics of Physicians provides more detailed analysis of the major professional activity of physicians. In addition, it provides board certification statistics for individual HSA's and counties, age and specialty distributions by county, and specialty and age distributions for Federal physicians. Further, because the CHSS collection effort relies on 50 separate agencies, uniformity in quality and effort is not assured. And indeed the CHSS is collecting physician data in only a limited number of states at this time.

INTERPRETATION OF TABLES

Because of the complexity and detail of the data presented in these volumes, care must be exercised in their interpretation. A few explanatory words are necessary about the treatment of the physician classifications used in these tabulations. As mentioned previously, it was felt that data on profes-

sionally active physicians would be most useful for

research and planning purposes. At the same time,

however, it was felt that the total pool of physician

manpower should be represented in these volumes. This

dual purpose caused some problem in the design of certain tables because of the inactive and not classified activity categories. These two categories are included in the tabulations but are treated differently depending on the type of cross-tabulation involved. Generally, in tables in which specialty is cross-tabulated with major professional activity, the inactive and not classified physicians are included in the total value but are not distributed by specialty. Instead, these two values are provided at the bottom of the specialty column under "Inactive," "Non-classified," and "Address Unknown''. To arrive at the total value, the inactive and not classified values should be added to the sum of the other major professional activity categories. This

Address Unknown

applies to Tables 1, 3, 6, 9, 16, and 19.

Physicians with unknown addresses are included only in Table 1 for informational purposes. Again, this value is not distributed throughout the table but is included in the grand total. Physicians with unknown addresses are excluded from all other national tables; therefore the grand total value on Table 1 exceeds the total value of Table 2 plus the total in Table 3, and the total reported in Table 4.

Availablity of Data

Massachusetts.

This concludes the description of data contained in the COP series. Every effort has been made to provide the most frequently requested information in a manner meaningful to most users. These data are also being made available in the form of print tapes from the

Bureau of Health Manpower. In addition, plans are also

underway to publish the COP series on a regular basis. 4 These observations are based on a comparison of the Health Data Annual for Massachusetts and the Characteristics of Physicians.

: AMA Physician Masterfile on which this publican is based.

The section that follows provides a brief overview of

AMA PHYSICIAN MASTERFILE⁵

rile data collection has been an AMA activity for ny years, the objectives, collection techniques, and of the data undergo constant review and have

dergone considerable changes each year. A masterfile physicians has been maintained by the Association ce 1906. However, in the early days of its existence, Masterfile was primarily a listing of physicians intained as a record-keeping device for membership i mailing purposes. Decisions were made on a day-to-

y basis without a unified approach and without ard as to what these decisions would mean in terms statistical methods and interpretation of the data. As research activities within the Association became re sophisticated, the complexity of data requirements reased. The Masterfile was, therefore, expanded and proved to meet these requirements. Today, the AMA ysician Masterfile is the most comprehensive and

nplete source of physician data in the United States.

ncludes information on every physician in the coun-

, members and non-members of the Association, on duates of American medical schools who are temarily practicing overseas, and graduates of foreign dical schools who are in the United States and meet S. education standards for primary recognition as ysicians. Thus, all physicians comprising the total ysician manpower pool are included on the AMA ysician Masterfile.⁸ A file is started on each individual upon entry into dical school or, in the case of foreign and Canadian

duates, upon entry into the U.S. As a physician's

ining and career develops, additional information is

led to the file—e.g., internship and residency train-, licensure board certification, professional affilians, and other characteristics. Although such tracteristics change over time, they are not subject to istant change. These types of characteristics are ined in the "historical" portion of the Masterfile. In lition, there is the "current professional activities"

loyment status. By definition, this current portion the Masterfile is subject to constant change and must updated through intense monitoring techniques. Prior to 1966, physician classification by specialty, vity, and employment was made through the issification of Professional Activities (CPA) system, ich was based upon a "private practice/not in

vate practice" concept. Data were collected under

-43.

tion of each physician's record that identifies his

rent address, professional activity, specialties, and

tivities. Several problems were inherent in this system a major one being that the system reflected a physicia

financial practice arrangement more so than his act professional activity. The United States National Co mittee on Vital and Health Statistics stated in 1964 th The ongoing series on physician characteristics be conducted by the American Medical Associati meets the need for data on...geographic location age, sex, and specialty. For principal activihowever, the AMA inquires about major activ without specifying as to direct care of patients. Un queries relating to the number of patients seen

classification system:

hours worked in each activity are made, physic manpower cannot be properly allocated among of ferent activities. This recommendation gained extensive consideration 1966 when the then AMA Department of Sur Research, which has been replaced by the Departm of Statistical Analysis and is now a part of the Al Center for Health Services Research and Developme began its efforts to update, improve, and expand AMA Physician Masterfile. In its evaluation of the d

titled Verification of Physicians' Professional

employer categories. 2. Lack of a criterion upon which to base classif Lack of information on the most recent update

base, it identified four major limitations in the C

Existence of categories which were not mutual

exclusive, resulting in confusion and duplicat

between and within activity, specialty,

- each individual record. 4. Unavailability of information on response ra
- for the annual verification questionnaire. These deficiencies were of sufficient concern to warr

major revisions in both the structure of the file and data collection procedures. Therefore, a four-year p ject (the Reclassification of Physicians Project) was itiated to redesign the classification system. Al undertook the Reclassification Project in cooperat with the National Center for Health Statistics of United States Public Health Service, the Branch

Demographic Surveys of the U.S. Bureau of the Cens and knowledgeable, researchers in academia. The first step in reclassification was the restructure of the format of the 1966 edition of the Distribution Physicians, Hospitals, and Hospital Beds, a publicate of the AMA Center for Health Services Research Development. Through a series of computer progra the old Masterfile category "private practice/n private practice" was converted to the more function "patient care/other professional activity." While 1966 format changes constituted a step in the r

direction, an important deficiency in the published

file of the physician population remained: data were

being collected under the old classification method

became obvious that the data collection procedures

to be revised to correlate with the new classifica

s system via a short postcard-type questionnaire ennis section draws heavily from: Goodman, L.J. Physician Distrition and Medical Licensure in the U.S., 1976. Chicago: American edical Association, 1977. or discussion of validation studies conducted on the AMA Physiin Masterfile, see Goodman, L.J., and Eisenberg, B.S., "The nality of Physician Data." Public Data Use, 5 (May 1977): pp. system. This facet of the Reclassification Project was mplemented in 1968, with the adoption of a new quesionnaire-Record of Physicians' Professional Ac-

ivilies. The new questionnaire was first used in 1968 in the ensus survey of 317,000 physicians. Each physician was asked to indicate the average number of hours worked per typical week in several areas within three categories-Professional Activities, Specialization, and

Present Employment Status. The use of a "time spent" device gave the physician a criterion upon which to classify his practice, and the confusion between and within the activity and employer categories was

eliminated. After five mailings a usable response of 87.4 percent was attained. All returned questionnaires were passed through a

series of clerical editing procedures and a quality control checkpoint. They were then keypunched and the data processed through a series of computer programs which assigned the activity, specialty, and employment classification to each physician record. A complete census was scheduled to be conducted

every three years. However, in order to verify the information gathered in 1968 under the new system, a complete census of 325,000 physicians was made again in 1969. The questionnaire, structurally the same as that of 1968, contained the physician's 1968 response with a column provided for corrections or changes. A usable response rate of 86.8 percent was attained. Analysis of the two sets of data revealed that the data collected in 1969 were consistent with that of 1968, therefore, confirming that the questionnaire used to gather the data was a reliable survey instrument. The most recent com-

plete census, for the purpose of this project, was conducted in 1973. The 1973 questionnaire is identical to that used in 1969 except for the addition of a section requesting address and other general information. The usable response rate was consistent at 86.8 percent. A copy of the questionnaire used in the 1973 census is presented in Exhibit B. Between census years, a comprehensive computerized

or publications, company mailings, physician correspondence, or hospitals, government agencies, medical schools, medical agencies, medical societies, specialty boards, and licensing agencies. Any indication of a change in professional status or address triggers a questions aire similar to the one used in the 1973 ceasus. The

physician is placed on a "change" file while follow-up

mailings are made to raise the response rate. In 1975,

approximately 3,500 weekly change questionnaires were

mailed per week.

weekly updating system keeps the Masterfile current. Each physician's record is dated to reflect the most recent change, which may be obtained for AMA mailings

As an additional check on the Masterfile between census years, the AMA's Center for Health Services Research and Development conducts year-end computer andits. A comparing of 1972 and 1973 year-end data shows the same consistency as the complete ceases data of 1968 and 1969. A similar comparison was conducted

These include the publications Distribution of Physicians, Selected Characteristics of the Physician Population, Medical School Alumni, Foreign Medical

its annual and periodic series of statistical tabulations.

Graduates, as well as reports on AMA membership, physician manpower, women physicians, and specialty society statistics. While the data collected for the Record of Physicians' Professional Activities questionnaire represent a major input to the AMA Physician Masterfile, data from other

sources are also incorporated. These other sources include: Medical Schools—Provides data on school and year of graduation, birthplace, birthdate, and

professional appointments. State Licensing Boards—Provides licensure status of physicians.

• Hospitals-Provides information on interns and residents, birthplace, and foreign medical graduates in training. Department of Defense—Provides data annually

on physicians in government service. American Specialty Boards—Provides data or board certification of physicians.

 Medical Societies—Provides data on membership in specialty, state, and county societies.

 Educational Council for Foreign Medica Graduates-Provides data on foreign medica

graduates.

While many sources provide data for inclusion into the Masterfile, data are also often extracted from th Masterfile for use by these agencies. In addition, th Masterfile is used by the National Center for Healt

Statistics; the Office of Emergency Preparedness in th Office of the President of the U.S.; the Office of th Secretary of DHEW; the National Institutes of Health various other federal, state, and local government ager cies; numerous universities and medical schools; state county, and specialty medical societies; the phar

maceutical industry; and ten addressing companies.

HEALTH SERVICE AREA DESIGNATIONS JULY 1, 1976

The National Health Planning and Resource Development Act of 1974 (PL #93-641) mandated that health service areas be established throughout th

United States. The legislation specified that each healt service area meet the following requirements:7 1. The area must be a rational geographic region

containing a comprehensive range of health se vices, and of a character suitable for the effective planning and development of health services.

at the completion of the 1977 congus. The reliability of the Manterfile was evaluated when the Center prepared

1974).

Committee on Interstate and Foreign Commerce, National Heal Policy, Health Planning and Resources Development Act of 197 Report No. 99-1382. (Washington: Government Printing Office

- 2. To the extent practicable, the area must include at least one center for the provision of highly specialized health services.
- 3. Upon establishment, the area must have a population between 500,000 and three million, with the following exceptions: the population may exceed three million if the area includes a standard
 - metropolitan statistical area (as determined by the Office of Management and Budget) with a population of more than three million persons; and the population of an area may be less than 500,000 in unusual circumstances, but not less than 200,000 except in highly unusual circumstances if the Governor of each state in which the area is located
- determines, with the approval of the Secretary, that the area meets the other requirements of this subsection. "Unusual" and "highly unusual" circumstances are to be defined by the Secretary in regulations. 4. To the maximum extent feasible, the boundaries
 - of the health service area must be coordinated with the boundaries of Professional Standards Review Organizations, existing regional planning areas. and State planning and administrative areas. Each standard metropolitan statistical area

(SMSA) must be entirely contained within the

boundaries of one health service area unless the Governor of each State in which a SMSA is located determines, with the approval of the Secretary, that a health service area should contain only part of the SMSA in order to meet the other requirements of this subsection.

The 205 Health Service Areas designated in July 1976 * are the definitions used in this publication. A listing of the HSA's and the counties, towns, or cities comprising them for the state treated in this volume follows below.

MISSISSIPPI

The State of Mississippi is designated as a single Health Service Area.

RECORD OF PHYSICIANS' PROFESSIONAL ACTIVITIES

DIRECTORY OF PHYSICIANS

Center for Health Services Research and Development

AMERICAN MEDICAL ASSOCIATION

535 N. Dearborn Street Chicago, Illinois 60610

Dear Doctor:

Please complete this questionnaire as soon as possible so that your official record is up-to-date with correct and current information for printing of the 1973 AMA DIRECTORY. Data obtained from this questionnaire will be aggregated and used to describe the distribution of physicians and to analyze health manpower. However, NO information from your record will be released to any organization for the purpose of developing independent physician data files.

Thank you.

Instructions

- 1. Please answer every question on the basis of your current activities.
- Indicate any changes. Information which you provided previously has been
 printed in this form. Please <u>complete</u> unanswered sections and make <u>discrete changes</u> where applicable.
- Upon completion, return the questionnaire at your <u>earliest possible con-</u> venience, using the preaddressed envelope.

Contents

The questionnaire is divided into four sections:

- Professional Activities—the types of activities in which each physician spends
 the most time during an <u>everage week</u>.
- II. Specialization—the time physicians spend in their major fields of specialization.
- III. <u>Present Employment Status</u>—the number of hours <u>per average week</u> spent under various practice arrangements, by type of practice organization or employer.
- IV. Address and General Information

EXHIBIT B
PHYSICIANS
PROFESSIONA
ACTIVITIES
QUESTIONNA

PROFESSIONAL ACTIVITIES		
Please describe your PRESENT professional activities by indicating the <u>average</u> number of hours spent during a typical week. Please answer EVERY question 1-8.	HOURS	PER WEEK
If you do not spend any hours on any particular activity below, so indicate by entering zero (0) hours in appropriate spacing.	Prior Census	Changes If Any
How many hours per week do you currently spend in a full-time TRAINING program as an intern or resident? Indicate whether you are a(n)		1 2
(If you checked extrer of the boxes, please proceed to questions 6, 7, and 8 and answer, if applicable.)	HRS.	3 HRS.
2 How many hours per week do you spend in PRACTICE INVOLVING DIRECT CARE OF PATIENTS? Direct care means seeing patients; however, it also includes patient services by such physicians as pathologists and radiologists.		
Exclude time spent in training, teaching, or research. Include travel time and time spent on record keeping and other office work connected with your patients.	HRS.	4 HRS.
3. How many hours per week do you spend on ADMINISTRATIVE ACTIVITIES, AS A SALARIED STAFF MEMBER OR EXECUTIVE OF AN ORGANIZATION?		
Exclude time spent on record keeping and office work connected with management of your own practice. Include activities connected with the administration or staff committees of a hospital or other health facility or agency, clinic or group, or any other organization by which you may be		•
salaried as an executive or staff member.	HRS.	5 HRS.
4. How many hours per week do you spend on MEDICAL TEACHING? Include hours spent in teaching as well as in preparation for subjects taught in medical schools, nursing schools, other hospital schools, hospitals, colleges, universities, or any other educational		A
a. OF THESE HOURS how many do you spend on direct care of patients? Exclude time devoted to patient care by house staff under your supervision.	няѕ.	HRS.
In view of possible overlap of hours spent in teaching and research, please do not double- count such hours, but report them instead in the most applicable category.	HRS.	7 HRS.
5. How many hours per week do you spend on MEDICAL RESEARCH? All phases of investigating medical problems regardless of source of funds for such research. a. OF THESE HOURS how many do you spend on direct care of patients?	HRS.	8 HRS.
Exclude time devoted to petient care by house staff under your supervision	HRS.	HRS.
6. How many hours per week do you spend on any OTHER medical activities (not listed above) INVOLVING DIRECT CARE of patients?	HRS.	HRS.
7. How many hours per week do you spend on any OTHER medical activities (not listed above) NOT INVOLVING direct care of patients?	HRS.	11 HRS.
8. About how many hours per week do you spend in ALL PROFESSIONAL ACTIV- ITIES? Total of questions 1 through 7 (exclude 4a and 5a)	12 HRS.	HRS
If you indicated "zero" on question 8, or if none of the above categories apply to you, please answer question 9.	,	1
9. Are your • RETIRED 2 SEMI-RETIRED Total of Security equivalent to
